Summary

Computer Engineer with hands-on experience in machine learning, deep learning, full-stack development, and AI-powered applications. Built projects combining Python backends, modern web interfaces, databases, and vision/LLM APIs. Seeking AI engineering or data engineering roles where practical software development and rapid learning can create measurable value.

Education

BACHELOR OF SCIENCE IN COMPUTER ENGINEERING
EASTERN MEDITERRANEAN UNIVERSITY
2021 – 2026 | Gazimağusa KKTC

Skills

Programming

Python, SQL, Java, C, C#, JavaScript

AI & Data

Machine Learning, Deep Learning, Scikit-learn, TensorFlow, Keras, Pandas, NumPy, LLM APIs

Development

Flask, React, REST APIs, PostgreSQL, SQLite, SQLAlchemy, Git, GitHub, Linux

Professional Experience

Anssoft Technology

Machine Learning & Deep Learning Intern

2025 | Konya/Türkiye

Developed ML models with Python and Scikit-learn; performed preprocessing, feature engineering, classification, and evaluation. Applied TensorFlow/Keras to deep learning experiments using Kaggle datasets.

EMU IT Cybersecurity Club

Vice President

2024 – 2025

Helped organize technical events and coordinated communication and operational activities within the club.

Central Lecture Halls, Eastern Mediterranean University

Administrative Supervisor Assistant

2024 – 2026

Supported daily operations in the university's busiest lecture-hall complex and resolved technical issues involving computers, projectors, sound systems, and conference-hall equipment.

Projects

Personal Portfolio Website [↗](#)

2026

Built a modern, responsive portfolio website from scratch using Next.js and TypeScript to showcase AI, data, and software engineering projects through structured case studies. Features project showcases, achievements, downloadable CV, GitHub links, responsive design, and interactive visual elements.

Artificial Intelligence Based Traffic Enforcement System

Graduation Project | Best Project Award

2025

Developed a full-stack traffic-violation platform using Flask, React, PostgreSQL, SQLAlchemy, JWT authentication, and role-based access for citizens, police officers, and administrators. Integrated Claude Vision AI to analyze uploaded evidence asynchronously and identify phone use, smoking, and seatbelt violations; also implemented plate search, dashboards, database migrations, and integration tests.

PhoenixDF - AI-Powered Research Assistant

Personal Project

2026

Built a Python/Flask platform that extracts and analyzes academic PDF content using an LLM API. Implemented summarization, PDF chat, quiz generation, flashcards, and document analysis workflows in a responsive web interface prepared for version control and deployment.

GameScope Intelligence Platform

Personal Project

2026

Developed a game data intelligence platform that collects, enriches, and validates metadata from Steam, RAWG, and IGDB. Built automated data pipelines and multi-source matching workflows using FastAPI, PostgreSQL, SQLAlchemy, Docker, and Next.js, with a focus on scalable data processing and metadata quality.

TaskFlow AI

Personal Project

2026

Developed an AI-powered task management platform using FastAPI, PostgreSQL, SQLAlchemy, JWT, Docker, and OpenAI API. Implemented secure authentication, AI-based task breakdown and priority suggestions, automated testing with Pytest, and CI workflows with GitHub Actions.

Certificates

Best Graduation Project Award

Department of Computer Engineering, Eastern
Mediterranean University — 2026
